Microsoft 365 Services

An Overview

Microsoft 365's subscription-based cloud solution gives you access to your data from anywhere, using a familiar set of web enabled tools.

Why should your organisation consider a move to 365?

Microsoft 365 is Microsoft's office suite hosted in the cloud – a powerful tool that can help your business to reach improved communication and collaboration goals.

The overarching aim of Microsoft 365 is to enable your employees to be more productive.

What does Microsoft 365 offer?

Office suite: Teams, Word, Excel and more

Email and Calendar: Connect with customers and employees using Outlook and Exchange

File storage: Manage files from anywhere with 1TB per user

Data protection controls: Help secure business data on personal and company-owned devices

Safest Windows ever: Get upgraded to Windows 11 and all associated security patches

Threat protection: Help protect PCs and devices from malware and viruses with patches automatically deployed to devices using Microsoft 365

Administration and deployment: Manage PCs and devices more easily by having all tools accessible in the Microsoft cloud

Dependability and support: Microsoft guarantees 99.9% uptime and 24/7 online and phone support

Why move to Microsoft 365?

Microsoft 365 can deliver payback in as little as 6 months from initial investment for most mid-sized organisations.

On average, Microsoft claims that organisations that migrate experience cost savings of up to 27%, with large enterprise enjoying even better results with savings averaging 29% compared to similar on-premise solutions.

Microsoft 365 offers built-in security and compliance capabilities, meaning IT teams do not spend extra resources sourcing trustworthy third party applications to ensure that they have an enterprise-grade solution which is secure and compliant.

Microsoft 365 protects user privacy by using only data for those services each user needs. It offers controls to help restrict accidental leakage of sensitive information by providing real-time alerts to users attempting to share such content. These controls also enable admins to set policies automatically encrypting the same.

Microsoft 365 was also first to receive written confirmation from the European Union's data protection authorities that Microsoft's enterprise cloud contracts meet the high standards of EU privacy law.

What's included?

Microsoft 365 Business Standard comes with desktop versions of Word, Excel, PowerPoint, and Outlook, providing you with collaborative workspaces to co-create using Microsoft Loop.

Host webinars with attendee registration and reporting while creating compelling content with video editing and design tools like Microsoft Clipchamp, all supported by Microsoft 365 Copilot which is available as an add-on.

Included with Microsoft 365 Business Standard as desktop, web, and mobile apps and secure cloud services

| Word | Excel | PowerPoint | Outlook | Teams | OneDrive | SharePoint | Exchange | ClipChamp | Microsoft Loop |

Included with Microsoft 365 Business Premium as desktop, web, and mobile apps and secure cloud services
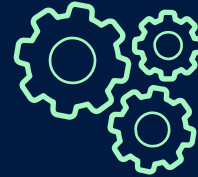

| Word | Excel | PowerPoint | Outlook |
