Offsite Backup & Disaster Recovery Solutions

Backup and DR solutions helping you protect your data and reputation

It's never been more important to back up your business data.

Loss of critical data can have a serious impact on employee productivity, day-to-day business operations and even on revenue.

This makes it imperative for businesses to have the right backup and disaster recovery solutions in place.

Data loss occurs primarily through human error, theft, viruses and hardware destruction – the chances of it happening to your organisation are not marginal.

We can help to ensure your information is backed up securely and easily retrievable if disaster strikes.

“Wanstor have been a breath of fresh air. They are so proactive in making recommendations, both to improve our setup and to implement real cost savings.”

Colin, Financial Controller

Common causes of data loss

Software failure

Loss of work is triggered by a force-quit

Human error

Accidental or malicious deletion of data

Theft

Normally happens when a device is stolen

Power outages

Loss of work in progress caused by improper shutdowns

Hardware impairment

Malfunctions in hardware leads to irretrievable data loss

Natural disasters

Fire and flooding can lead to business critical data being destroyed

Ransomware + malware

Ransomware, viruses and malware can infiltrate, damage or delete data

Backup for Microsoft 365

Businesses that have moved to Microsoft 365 are often unaware that their data is not backed up, and may be surprised to learn that is not Microsoft's responsibility to do so.

Even though your business-critical information is stored in the cloud, you still need this backed up to prevent major data loss. Wanstor's backup for Microsoft 365 eliminates the risk of losing access to and control over your Microsoft 365 data, including Exchange Online, SharePoint Online, OneDrive for Business and Microsoft Teams.

Point-in-time

Quarterly review to ensure
successful running

Data stored
in the UK

As a Veeam Cloud & Service Provider Partner, we provide secure cloud backup for your data with quarterly service reviews.

Enterprise Cloud Backup and Disaster Recovery Solutions

Veeam Cloud Connect and Cloud Connect Replication for all your backup and replication needs

Veeam Cloud Connect™

Veeam Cloud Connect Backup gives you a fast, secure way to backup your on-premise server infrastructure and store data in Wanstor's private cloud repository.

- ✓ Copy your data to an offsite location
- ✓ Store backups in a cloud repository

All backup options feature *Insider Protection* to protect your data if backups are deleted, maliciously or otherwise, from within the business. Backups deleted in Wanstor's cloud repository move to recycling, from where data can be restored.

Data snapshots are typically taken nightly and backed up in Wanstor's cloud repository. Should the need arise, we restore your data from the last snapshot taken.

A higher backup frequency means less data loss is incurred.

Veeam Cloud Connect™ Replication

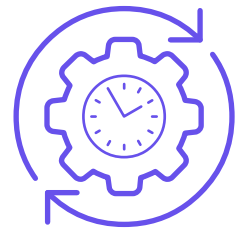

Many businesses won't wait until backups can be recovered in the event of disaster, so we provide DRaaS or *Disaster Recovery as a Service* through image-based VM replication.

This process enables the creation of real-time VM replicas on Wanstor's private cloud. Should you need us to we can quickly and easily fail your business over to these replicas, meaning very little downtime.

- ✓ Replication
- ✓ Full or Partial site failover
- ✓ Failback
- ✓ Restore from replica

As a Veeam Cloud & Solution Partner, our expertise in backup and disaster recovery solutions can help you shape a business continuity plan to suit your specific needs.

Why choose Wanstor for your Backup and Disaster Recovery solutions?

Flexible options available dependent on the frequency and retention period required for your backups

Backups are stored and managed externally from your own infrastructure to guarantee dual resiliency

Backups are copied into Wanstor's cloud repository providing greater protection against insider attempts to access data

As a Veeam Cloud & Service Provider and a Microsoft Solution Partner we can help you plan your backup and DR strategy

Backups are included as standard for all Wanstor cloud services

“We have the best of both worlds – an extremely capable on-site engineer and the backing of a Managed Service Provider powerhouse, with all of the capability and technology that I need. I am never dealing with a faceless IT provider – Wanstor knows our organisation back to front.”

Max Savage, Head of IT, Hestia
